

Supply Chain Manufacturing

D&H Industries serves as a supply chain partner to customers providing turn-key solutions for their long-term manufacturing programs. Our programmatic approach offers complete control from start to finish over prototype development, procurement, product quality, inventory control, and on-time delivery. D&H provides a competitive advantage through its efficient supply chain model, offering increased productivity, reduced manufacturing cost, and unmatched customer service while combatting supply chain disruptions.

✓ Prototypes

Proficient in new product development and design for manufacturability experts.

✓ Engineering

Engineering Evaluation Process identifies all foreseeable obstacles before production — DFM.

✓ In House Tooling

Complete design and tool-making focused on overall volume and life span performance.

✓ Quality Protocol

Quality plan controls all manufacturing process aspects, testing procedures, document control, and reporting requirements.

✓ Procurement

Supply chain management of metal acquisition with ERP system triggered buying, ensuring on-hand material with lead time monitoring.

✓ Scheduling

Dedicated press for die tryout and priority scheduling over non-programmatic work with program status reporting option.

✓ Production

Massive stamping and fabrication capacity of 170,000+ sq. ft., two dozen presses, and a 100+ highly-skilled workforce. Lean manufacturing and Kanban program approach with machine tool redundancy, dedicated production cells option, and climate-controlled inspection.

✓ Full-Service Welding Fabrication

MIG, robotic, resistance, and laser welding supported by 5-axis laser cutting, press brake, and temp tooling.

✓ Inspection

Testing, in-process, and final inspections — Utilizing CMMs, FaroArms, vision systems, gages, and other protocol processes.

✓ Managed Processes

Thermal processes, coatings, destructive and non-destructive testing.

✓ Kitting and Assembly

Organize and assemble parts into manageable kits; streamline packing, handling, and shipping operations; optimize inventory tracking.

✓ Inventory Control

Real-time inventory management with Kanban pull system replenishment and forecast-driven SCM.

✓ On-Time Delivery

Programmatic manufacturing ensures process control for on-time delivery — Exportation services through expert freight forwarder partners.
